

WHAT IS CLAIMED IS:

1. Packaging for a game console controller, the game console controller including at least one button and at least one directional control device, the packaging comprising:
 - a first section; and
 - a second section coupled to said first section;whereby the game console controller is positioned between at least a portion of said first section and said second section, so that the at least one button is accessible and the at least one directional control device is covered by at least one of the first and second sections.
2. Packaging according to claim 1, wherein said first and second sections are formed from plastic.
3. Packaging according to claim 2, wherein said first and second sections are transparent.
4. Packaging according to claim 1, wherein the game console controller has a first handle and a second handle; and said second section is coupled to said first section in such a manner that said first and second sections cover the entire second handle, while exposing at least a portion of the first handle.
5. Packaging according to claim 4, wherein said second section is coupled to said first section in such a manner that a majority of the first handle is exposed.
6. Packaging according to claim 5, wherein said first and second sections cover substantially all of a remainder of the controller.
7. Packaging according to claim 4, wherein said second section is coupled to said first section in such a manner that said first and second sections expose at least four buttons on the game console controller.

8. Packaging according to claim 1, wherein
the game console controller is positioned between at least a portion of said first section and said second section, so that at least two directional control devices are covered by at least one of the first and second sections.
9. Packaging according to claim 8, wherein
said second section is coupled to said first section in such a manner that said first and second sections expose at least four buttons on the game console controller.
10. Packaging according to claim 1, wherein
said second section is coupled to said first section in such a manner that a opening is created therebetween, said opening adapted to allow a portion of the game console controller to extend therethrough.
11. Packaging for a game controller, the controller including a first handle with a first control device and a main portion with a second control device, the packaging comprising:
a first section adapted to cover substantially all of the main portion, including the second control device, and expose substantially all of the first handle, including the first control device;
and
a second section adapted to be coupled to said first section, said first and second sections enclosing at least a portion of the controller.
12. Packaging according to claim 11, wherein
said first and second sections are formed from plastic.
13. Packaging according to claim 12, wherein
said first and second sections are transparent.
14. Packaging according to claim 11, wherein
the controller includes a second handle; and
said second section is coupled to said first section in such a manner that said first and second sections cover the entire second handle.

15. Packaging according to claim 14, wherein
the first control device is a button.
16. Packaging according to claim 11, wherein
the second control device is a directional control device; and
the controller is positioned between at least a portion of said first section and said second section, so that said directional control device is covered by said first section.
17. Packaging for a game controller, the game controller including a main portion, a first handle and a second handle, the first handle having at least one control button thereon and the second handle having at least one directional control device thereon, the packaging comprising:
a front portion;
a back portion coupled to said front portion, such that said front and back portions enclose the second handle and a portion of the main portion; and
an opening between the front and the back portions, said opening adapted to allow substantially all of the first handle to extend therethrough and thereby exposing the at least one control button.
18. Packaging according to claim 17, wherein
said front and back portion are formed from transparent plastic.
19. A packaging system for a game controller, the game controller including a main portion, a first handle, and a second handle, the first handle having at least one control button thereon and at least one of the second handle and the main portion having at least one directional control device thereon, the packaging comprising:
a first portion having a cavity therein, said cavity adapted to receive the second handle and at least a portion of the main portion, including the at least one directional control device; and
an opening in said cavity, said opening adapted to allow the first handle to extend therethrough and expose at least the at least one control button.
20. A packaging system according to claim 19, further comprising:
a first leg coupled to said first portion; and
a second leg coupled to said first portion.

21. A packaging system according to claim 20, wherein
said first leg, said second leg and said first portion form a substantially C-shape.
22. Packaging according to claim 21, wherein
said first handle extends through said opening and away from said first portion; and
at least one of said first and second legs extends away from said base portion and farther
than the first handle.
23. Packaging according to claim 22, wherein
both of said first and second legs extends away from said base portion and farther than the
first handle
